

Maurice Johnson

Title: Senior Solutions Engineer

Phone: 904.477.2268

Email: mauricejohnson3@protonmail.com

Location: Jacksonville, Florida, United States

Work Authorization: US Citizen

Website: <https://www.linkedin.com/in/maurice-johnson-80085/>

Summary

My career path represents a 'Philosophy of Change'. From old Legacy Systems to Bleeding Edge Technology I have observed first-hand how technology borrows from itself, builds on top of itself. I have had the luxury of working within Scalable Backend Architectures, RESTful API design patterns, Cloud-first ecosystems, CI/CD Pipelines, Legacy Migration Conversions, and Lift & Shift Initiatives. Recently certified in **AI Workflow Automation, Mastery** and **Python**, with hands-on experience integrating LLMs (GPT-4/GPT-5, OpenAI CodeX) into the software development lifecycle. All to drive enterprise efficiency and performance through automation and reusability.

Experience

Apr 2015 – present

Industries:

(Education, Insurance, Government, Finance, Healthcare, Ecommerce, & Transportation)

- **AI Consultant** (*Contract*) – Handshake – Jacksonville, FL – Mar 2026 – current
 - **Actions:** Engineered a suite of full-stack applications and data visualization tools for the **2026 Handshake OpenAI Codex Creator Challenge**.
 - **Context:** Developed a series of Single Page Web Apps (SPAs) focused on infrastructure automation, data analysis, and recruitment technology.
 - **Results:** Significant improvement in overall SDLC turn-around time.
 - Financial News Screener across multiple RSS Feeds & Filter Functionality
 - Employment Portal Screener with ATS Validation & Dice Integration
 - Job Description Technical Assessment Generator
 - AWS infrastructure Decision Utility
 - Individual Options Trading Suite - Charles Schwab
 - **Actions:** Architected and deployed multi-path automation workflow pipelines using **n8n** and **Make.com** integrated with **OpenAI GPT**.
 - **Context:** Streamlining data extraction, social media syndication, and customer support operations through low-code and AI integrations.
 - **Results:**
 - Automated Hacker News Scraper via n8n, process insights through GPT, and publish directly to the **Bluesky** pipeline.

- **Autonomous Task Management Make.com** multi-path assistant connecting Telegram to Google Workspace (Mail/Calendar).
 - **Automated Order-Tracking Bot** and a **Receipt Tracking System** that extracts data from Gmail images via GPT and populates Google Sheets automatically.
 - **Actions:** Engaged in continuous "on-the-bench" technical upskilling and certification programs.
 - **Context:** Maintaining alignment with rapidly evolving industry standards in Artificial Intelligence and Machine Learning.
 - **Results:** Successfully adapted technical stack to meet modern AI enterprise requirements, supported by a portfolio of relevant industry certifications.
-
- **Senior Platform/API Engineer** – University of Phoenix – Lake Mary, FL – Oct 2022 – Aug 2025
– *Contract to Hire via Insight Global*
 - **Action:** Led Legacy Framework Migrations from **Java 7/8 – 11, 17, & 21; Spring 2.x to Spring Boot 3.x+**; Spring RESTful API Security Templates
 - **Context:** Modernized monolithic Documentum and Funding Domain systems into cloud-native microservices on **AWS EKS**
 - **Result:** Eliminated critical technical debt and optimized service consumption across the enterprise infrastructure.
 - **Action:** Integrated Event-Driven Design Patterns, with respect to Domain-Driven Design Patterns, by leveraging **AWS MSK and Glue with Kafka**.
 - **Context:** Targeted newly integrated high-latency vendor software, Flowable, across the platform's messaging layer
 - **Result:** Substantially increased performance and throughput while reducing "across-the-wire" latency
 - **Action:** Provisioned high-availability AWS resources using **Terraform** and **Spacelift**.
 - **Context:** Engineered robust **CI/CD pipelines** on **EKS/ECS** to automate the onboarding of project teams for third-party Flowable and Documentum integrations
 - **Result:** Significantly reduced manual configuration time and streamlined the deployment lifecycle for cross-functional engineering teams
 - **Action:** Established "Golden Path" Engineering Roadmaps, Trouble-shooting Guides, and Root Cause Analysis (RCA) within Atlassian **Confluence**.
 - **Context:** Eliminating knowledge silos while standardizing API HTTP Request/Response Bodies during a period of rapid organizational growth.
 - **Result:** Accelerated developer onboarding and ensured architectural governance across the Funding and Documentum domains
 - **Action:** Integrated **New Relic** platform observability across the cloud ecosystem, for Flowable Vendor Product.

- **Context:** Developed customized JSON logging and domain-driven dashboards for real-time production monitoring.
- **Result:** Significantly reduced Mean Time to Recovery (MTTR) by providing actionable insights into system health and performance bottlenecks.

- **Lead Software Engineer** – Allstate – Jacksonville, FL – Mar 2019 – Mar 2022
 - **Action:** Spearheaded the integration of **IBM z/OS Connect** for Custom Application BatchCard Services.
 - **Context:** Required bridging mission-critical legacy mainframe data with a modern **RESTful Microservice** architecture.
 - **Result:** Successfully modernized legacy data access, bridging the gap between modern and legacy infrastructure
 - **Action:** Architected a high-availability **Azure/CaaS** environment managing 52 Docker images across 12 Kubernetes namespaces.
 - **Context:** Part of the "Transformative Growth" initiative to scale enterprise-level container orchestration bring the infrastructure to an ONPREM Cloud Stack.
 - **Result:** Ensured 24/7 system availability and standardized the deployment pipeline using **Jenkins, Groovy, and HTML** with the basis of parameterization.
 - **Action:** Engineered a custom **Java Spring Boot Wire Mock Framework** for JSON-based API simulation.
 - **Context:** Aimed at decoupling internal team dependencies during the development of complex microservices
 - **Result:** Established as an enterprise alternative to product licensing, effectively reducing developer overlapping project dependencies and accelerating delivery timelines.
 - **Action:** Comprehensive Database Administration (DBA) and Modeling for **SQL Server and Oracle PL/SQL**.
 - **Context:** Data Normalization & schema re-design for **V3 AIM/Billing** Vendor Software.
 - **Result:** Ensured high-performance data retrieval & strict **transactional consistency** with respect to the Vendor Product

- **Senior Backend Engineer** – OneMain Financial – Evansville, IN – Jan 2017 – Sep 2017
 - *Contract*
 - **Action:** Maintained 24/7 high-availability **Java/J2EE APIs** and **REST/SOAP Web Services**.
 - **Context:** Leveraged **Spring Boot & Hibernate** to enable real-time analytics for automotive risk mitigation and asset recovery.
 - **Result:** Successfully optimized **JSON/XML** processing using **Jersey and Jackson**, resulting in significantly improved response times for critical financial reporting.

- **Action:** Optimized complex data exchanges and messaging integration across **DB2, SQL Server, and Oracle PL/SQL**.
- **Context:** Operated within a **WebSphere** environment to facilitate seamless data flow across the lending department and personal loans division.
- **Result:** Ensured strict data integrity and compliance with financial auditing requirements through comprehensive testing using **SOAP UI and JUnit**.

- **Senior Software Engineer** – Heritage Services – Indianapolis, IN – Apr 2015 – Aug 2016
 - **Action:** Spearheaded the integration of Open-Source Technology Stacks. architecture using **Leaflet and OpenStreetMap**.
 - **Context:** Proof Of Concept (POC) leveraging **JAVA, Hibernate, & Oracle PL/SQL** with **Leaflet & OpenStreetMaps** to identify alternative transportation routes & Zero Landfill Opportunities.
 - **Result:** Provided opportunities for reduction in transportations costs and increase in sales growth.

Technical Skills

- **AI and Automation:** n8n, Make.com, OpenAI CodeX, ChatGPT, Copilot, Google Gemini, Anthropic Claude, Prompt Engineering, Node.js, Javascript, HTML, CSS, Typescript, React.
- **Observability and Monitoring:** New Relic (JSON Logging), AWS CloudWatch, Splunk, Grafana Datadog.
- **Cloud Platforms:** **AWS**, EKS, ECS, EC2, S3, ELB, VPC, SSM, CodeBuild, CodeDeploy, CodePipeline, IAM (Roles/Policies), Secrets Manager, Parameter Store, MSK, Glue, RDS, DynamoDB, PostgreSQL, Redshift, Cognito, **Azure**, Microsoft Entra ID (SSO), ForgeRock integration.
- **DevOps and Infrastructure:** Docker, Podman, Kubernetes, Helm, Terraform, Terraform Cloud, Spacelift, CloudFormation, Istio Service Mesh, Sidecar patterns.
- **CI/CD and Build Tools:** Jenkins, GitHub Actions, Maven, Gradle, JFrog Artifactory, JFrog X-Ray, SonarQube, NPM, PIP, Winget, Chocolatey.
- **Programming and Scripting:** Java, Python, SQL, Bash, PowerShell, Groovy (Jenkins DSL), cURL, .NET at Statefarm 2002 to 2004.
- **Frameworks and Libraries:** Spring Boot, Spring Framework, Spring Cloud, Spring Security, Spring Web, JPA, Hibernate, JUnit, Mockito, PowerMockito, Selenium.
- **Messaging and Integration:** IBM z/OS Connect, COBOL, JCL, Apache Kafka, RESTful APIs, Microservices, Web Services, JWT, OAuth2, Postman
- **Data and Configuration:** JSON, XML, YAML, YML, Oracle PL/SQL, Git, GitHub, BitBucket, GitBash.
- **Methodologies and Environments:** Agile (Scrum/Kanban), Waterfall, Domain-Driven Design (DDD), Test-Driven Development (TDD).
- **Operating Systems:** Linux, Unix, Windows.

Education

- **Bachelor of Science: Computer Science** | Indiana State University | Terre Haute, IN
- **Bachelor of Science: Mechanical Engineering** | Southern Illinois University | Carbondale, IL

Certifications & Awards

- **AI Workflow Automation** | University of South Florida – 05/2026
- **AI Master Program** | Coursiv (ChatGPT, Claude, Gemini, DeepSeek, etc.) – 03/2026
- **PCEP – Certified Associate-Level Python Programmer** | Python Institute – 11/2025
- **Eagle Scout** | Boy Scouts of America– 05/1989
